KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 1: Executive Summary

Document Reference: KMRL/TECH/2026/001

Reporting Period: August 2026 | Review Page: 1

This section presents the findings associated with executive summary across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 1 and complete the required corrective work by 2026-09-02.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-22.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-02.

Deadline Information

The primary completion deadline for this section is 2026-09-02. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 2: Operations Review

Document Reference: KMRL/TECH/2026/002

Reporting Period: August 2026 | Review Page: 2

This section presents the findings associated with operations review across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 2 and complete the required corrective work by 2026-09-03.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-23.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-03.

Deadline Information

The primary completion deadline for this section is 2026-09-03. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 3: Station Maintenance

Document Reference: KMRL/TECH/2026/003

Reporting Period: August 2026 | Review Page: 3

This section presents the findings associated with station maintenance across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 3 and complete the required corrective work by 2026-09-04.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-24.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-04.

Deadline Information

The primary completion deadline for this section is 2026-09-04. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 4: Track and Civil Infrastructure

Document Reference: KMRL/TECH/2026/004

Reporting Period: August 2026 | Review Page: 4

This section presents the findings associated with track and civil infrastructure across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 4 and complete the required corrective work by 2026-09-05.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-25.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-05.

Deadline Information

The primary completion deadline for this section is 2026-09-05. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 5: Electrical Systems

Document Reference: KMRL/TECH/2026/005

Reporting Period: August 2026 | Review Page: 5

This section presents the findings associated with electrical systems across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 5 and complete the required corrective work by 2026-09-06.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-26.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-06.

Deadline Information

The primary completion deadline for this section is 2026-09-06. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 6: Rolling Stock Maintenance

Document Reference: KMRL/TECH/2026/006

Reporting Period: August 2026 | Review Page: 6

This section presents the findings associated with rolling stock maintenance across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 6 and complete the required corrective work by 2026-09-07.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-27.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-07.

Deadline Information

The primary completion deadline for this section is 2026-09-07. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 7: Signalling and Telecommunications

Document Reference: KMRL/TECH/2026/007

Reporting Period: August 2026 | Review Page: 7

This section presents the findings associated with signalling and telecommunications across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 7 and complete the required corrective work by 2026-09-08.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-28.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-08.

Deadline Information

The primary completion deadline for this section is 2026-09-08. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 8: Passenger Safety

Document Reference: KMRL/TECH/2026/008

Reporting Period: August 2026 | Review Page: 8

This section presents the findings associated with passenger safety across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 8 and complete the required corrective work by 2026-09-09.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-29.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-09.

Deadline Information

The primary completion deadline for this section is 2026-09-09. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 9: Emergency Preparedness

Document Reference: KMRL/TECH/2026/009

Reporting Period: August 2026 | Review Page: 9

This section presents the findings associated with emergency preparedness across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 9 and complete the required corrective work by 2026-09-10.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-30.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-10.

Deadline Information

The primary completion deadline for this section is 2026-09-10. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 10: Incident Review

Document Reference: KMRL/TECH/2026/010

Reporting Period: August 2026 | Review Page: 10

This section presents the findings associated with incident review across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 10 and complete the required corrective work by 2026-09-11.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-01.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-11.

Deadline Information

The primary completion deadline for this section is 2026-09-11. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 11: Inspection Findings

Document Reference: KMRL/TECH/2026/011

Reporting Period: August 2026 | Review Page: 11

This section presents the findings associated with inspection findings across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 11 and complete the required corrective work by 2026-09-12.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-02.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-12.

Deadline Information

The primary completion deadline for this section is 2026-09-12. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 12: Preventive Maintenance

Document Reference: KMRL/TECH/2026/012

Reporting Period: August 2026 | Review Page: 12

This section presents the findings associated with preventive maintenance across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 12 and complete the required corrective work by 2026-09-13.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-03.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-13.

Deadline Information

The primary completion deadline for this section is 2026-09-13. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 13: Corrective Maintenance

Document Reference: KMRL/TECH/2026/013

Reporting Period: August 2026 | Review Page: 13

This section presents the findings associated with corrective maintenance across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 13 and complete the required corrective work by 2026-09-14.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-04.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-14.

Deadline Information

The primary completion deadline for this section is 2026-09-14. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 14: Asset Management

Document Reference: KMRL/TECH/2026/014

Reporting Period: August 2026 | Review Page: 14

This section presents the findings associated with asset management across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 14 and complete the required corrective work by 2026-09-15.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-05.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-15.

Deadline Information

The primary completion deadline for this section is 2026-09-15. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 15: Procurement Activities

Document Reference: KMRL/TECH/2026/015

Reporting Period: August 2026 | Review Page: 15

This section presents the findings associated with procurement activities across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 15 and complete the required corrective work by 2026-09-16.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-21.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-16.

Deadline Information

The primary completion deadline for this section is 2026-09-16. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 16: Tender and Contract Monitoring

Document Reference: KMRL/TECH/2026/016

Reporting Period: August 2026 | Review Page: 16

This section presents the findings associated with tender and contract monitoring across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 16 and complete the required corrective work by 2026-09-17.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-22.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-17.

Deadline Information

The primary completion deadline for this section is 2026-09-17. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 17: Financial Review

Document Reference: KMRL/TECH/2026/017

Reporting Period: August 2026 | Review Page: 17

This section presents the findings associated with financial review across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 17 and complete the required corrective work by 2026-09-18.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-23.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-18.

Deadline Information

The primary completion deadline for this section is 2026-09-18. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 18: Human Resources

Document Reference: KMRL/TECH/2026/018

Reporting Period: August 2026 | Review Page: 18

This section presents the findings associated with human resources across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 18 and complete the required corrective work by 2026-09-19.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-24.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-19.

Deadline Information

The primary completion deadline for this section is 2026-09-19. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 19: Training and Competency

Document Reference: KMRL/TECH/2026/019

Reporting Period: August 2026 | Review Page: 19

This section presents the findings associated with training and competency across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 19 and complete the required corrective work by 2026-09-20.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-25.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-20.

Deadline Information

The primary completion deadline for this section is 2026-09-20. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 20: Safety Compliance

Document Reference: KMRL/TECH/2026/020

Reporting Period: August 2026 | Review Page: 20

This section presents the findings associated with safety compliance across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 20 and complete the required corrective work by 2026-09-01.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-26.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-01.

Deadline Information

The primary completion deadline for this section is 2026-09-01. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 21: Environmental Management

Document Reference: KMRL/TECH/2026/021

Reporting Period: August 2026 | Review Page: 21

This section presents the findings associated with environmental management across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 21 and complete the required corrective work by 2026-09-02.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-27.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-02.

Deadline Information

The primary completion deadline for this section is 2026-09-02. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 22: Quality Assurance

Document Reference: KMRL/TECH/2026/022

Reporting Period: August 2026 | Review Page: 22

This section presents the findings associated with quality assurance across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 22 and complete the required corrective work by 2026-09-03.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-28.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-03.

Deadline Information

The primary completion deadline for this section is 2026-09-03. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 23: Security Operations

Document Reference: KMRL/TECH/2026/023

Reporting Period: August 2026 | Review Page: 23

This section presents the findings associated with security operations across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 23 and complete the required corrective work by 2026-09-04.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-29.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-04.

Deadline Information

The primary completion deadline for this section is 2026-09-04. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 24: Cleaning and Housekeeping

Document Reference: KMRL/TECH/2026/024

Reporting Period: August 2026 | Review Page: 24

This section presents the findings associated with cleaning and housekeeping across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 24 and complete the required corrective work by 2026-09-05.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-30.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-05.

Deadline Information

The primary completion deadline for this section is 2026-09-05. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 25: Escalator and Elevator Maintenance

Document Reference: KMRL/TECH/2026/025

Reporting Period: August 2026 | Review Page: 25

This section presents the findings associated with escalator and elevator maintenance across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 25 and complete the required corrective work by 2026-09-06.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-01.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-06.

Deadline Information

The primary completion deadline for this section is 2026-09-06. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 26: Fire and Life Safety

Document Reference: KMRL/TECH/2026/026

Reporting Period: August 2026 | Review Page: 26

This section presents the findings associated with fire and life safety across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 26 and complete the required corrective work by 2026-09-07.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-02.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-07.

Deadline Information

The primary completion deadline for this section is 2026-09-07. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Reporting Period: August 2026 | Review Page: 35

This section presents the findings associated with water and drainage systems across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 35 and complete the required corrective work by 2026-09-16.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-26.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-16.

Deadline Information

The primary completion deadline for this section is 2026-09-16. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 36: Structural Inspection

Document Reference: KMRL/TECH/2026/036

Reporting Period: August 2026 | Review Page: 36

This section presents the findings associated with structural inspection across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 36 and complete the required corrective work by 2026-09-17.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-27.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-17.

Deadline Information

The primary completion deadline for this section is 2026-09-17. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 37: Roof and Building Maintenance

Document Reference: KMRL/TECH/2026/037

Reporting Period: August 2026 | Review Page: 37

This section presents the findings associated with roof and building maintenance across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 37 and complete the required corrective work by 2026-09-18.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-28.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-18.

Deadline Information

The primary completion deadline for this section is 2026-09-18. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 38: Work Permit Management

Document Reference: KMRL/TECH/2026/038

Reporting Period: August 2026 | Review Page: 38

This section presents the findings associated with work permit management across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 38 and complete the required corrective work by 2026-09-19.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-29.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-19.

Deadline Information

The primary completion deadline for this section is 2026-09-19. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 39: Contractor Safety

Document Reference: KMRL/TECH/2026/039

Reporting Period: August 2026 | Review Page: 39

This section presents the findings associated with contractor safety across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 39 and complete the required corrective work by 2026-09-20.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-30.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-20.

Deadline Information

The primary completion deadline for this section is 2026-09-20. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 40: Material Management

Document Reference: KMRL/TECH/2026/040

Reporting Period: August 2026 | Review Page: 40

This section presents the findings associated with material management across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 40 and complete the required corrective work by 2026-09-01.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-01.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-01.

Deadline Information

The primary completion deadline for this section is 2026-09-01. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 41: Spare Parts Inventory

Document Reference: KMRL/TECH/2026/041

Reporting Period: August 2026 | Review Page: 41

This section presents the findings associated with spare parts inventory across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 41 and complete the required corrective work by 2026-09-02.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-02.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-02.

Deadline Information

The primary completion deadline for this section is 2026-09-02. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 42: Technical Audit

Document Reference: KMRL/TECH/2026/042

Reporting Period: August 2026 | Review Page: 42

This section presents the findings associated with technical audit across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 42 and complete the required corrective work by 2026-09-03.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-03.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-03.

Deadline Information

The primary completion deadline for this section is 2026-09-03. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 43: Internal Audit Findings

Document Reference: KMRL/TECH/2026/043

Reporting Period: August 2026 | Review Page: 43

This section presents the findings associated with internal audit findings across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 43 and complete the required corrective work by 2026-09-04.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-04.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-04.

Deadline Information

The primary completion deadline for this section is 2026-09-04. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 44: Risk Assessment

Document Reference: KMRL/TECH/2026/044

Reporting Period: August 2026 | Review Page: 44

This section presents the findings associated with risk assessment across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 44 and complete the required corrective work by 2026-09-05.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-05.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-05.

Deadline Information

The primary completion deadline for this section is 2026-09-05. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

KOCHI METRO RAIL LIMITED

Technical Operations and Maintenance Review

Section 45: Business Continuity

Document Reference: KMRL/TECH/2026/045

Reporting Period: August 2026 | Review Page: 45

This section presents the findings associated with business continuity across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 45 and complete the required corrective work by 2026-09-06.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-21.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-06.

Deadline Information

The primary completion deadline for this section is 2026-09-06. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Section 52: Accessibility Review

Document Reference: KMRL/TECH/2026/052

Reporting Period: August 2026 | Review Page: 52

This section presents the findings associated with accessibility review across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 52 and complete the required corrective work by 2026-09-13.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-28.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-13.

Deadline Information

The primary completion deadline for this section is 2026-09-13. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 53: Staff Welfare

Document Reference: KMRL/TECH/2026/053

Reporting Period: August 2026 | Review Page: 53

This section presents the findings associated with staff welfare across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 53 and complete the required corrective work by 2026-09-14.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-29.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-14.

Deadline Information

The primary completion deadline for this section is 2026-09-14. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 54: Medical and First Aid Facilities

Document Reference: KMRL/TECH/2026/054

Reporting Period: August 2026 | Review Page: 54

This section presents the findings associated with medical and first aid facilities across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 54 and complete the required corrective work by 2026-09-15.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-30.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-15.

Deadline Information

The primary completion deadline for this section is 2026-09-15. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 55: Cybersecurity Controls

Document Reference: KMRL/TECH/2026/055

Reporting Period: August 2026 | Review Page: 55

This section presents the findings associated with cybersecurity controls across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 55 and complete the required corrective work by 2026-09-16.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-01.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-16.

Deadline Information

The primary completion deadline for this section is 2026-09-16. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 56: Information Technology Systems

Document Reference: KMRL/TECH/2026/056

Reporting Period: August 2026 | Review Page: 56

This section presents the findings associated with information technology systems across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 56 and complete the required corrective work by 2026-09-17.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-02.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-17.

Deadline Information

The primary completion deadline for this section is 2026-09-17. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 57: Document Management

Document Reference: KMRL/TECH/2026/057

Reporting Period: August 2026 | Review Page: 57

This section presents the findings associated with document management across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 57 and complete the required corrective work by 2026-09-18.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-03.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-18.

Deadline Information

The primary completion deadline for this section is 2026-09-18. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 58: Records Management

Document Reference: KMRL/TECH/2026/058

Reporting Period: August 2026 | Review Page: 58

This section presents the findings associated with records management across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 58 and complete the required corrective work by 2026-09-19.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-04.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-19.

Deadline Information

The primary completion deadline for this section is 2026-09-19. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 59: Compliance Review

Document Reference: KMRL/TECH/2026/059

Reporting Period: August 2026 | Review Page: 59

This section presents the findings associated with compliance review across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 59 and complete the required corrective work by 2026-09-20.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-10-05.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-20.

Deadline Information

The primary completion deadline for this section is 2026-09-20. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Section 60: Management Action Plan

Document Reference: KMRL/TECH/2026/060

Reporting Period: August 2026 | Review Page: 60

This section presents the findings associated with management action plan across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 60 and complete the required corrective work by 2026-09-01.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-21.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-01.

Deadline Information

The primary completion deadline for this section is 2026-09-01. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 61: Final Recommendations

Document Reference: KMRL/TECH/2026/061

Reporting Period: August 2026 | Review Page: 61

This section presents the findings associated with final recommendations across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 61 and complete the required corrective work by 2026-09-02.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-22.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-02.

Deadline Information

The primary completion deadline for this section is 2026-09-02. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 62: Executive Summary

Document Reference: KMRL/TECH/2026/062

Reporting Period: August 2026 | Review Page: 62

This section presents the findings associated with executive summary across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 62 and complete the required corrective work by 2026-09-03.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-23.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-03.

Deadline Information

The primary completion deadline for this section is 2026-09-03. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.

Technical Operations and Maintenance Review

Section 63: Operations Review

Document Reference: KMRL/TECH/2026/063

Reporting Period: August 2026 | Review Page: 63

This section presents the findings associated with operations review across the Kochi Metro Rail Limited operational environment. The review considers current operational conditions, maintenance requirements, safety controls, inspection observations, and pending departmental responsibilities.

The technical team reviewed available records, maintenance logs, inspection observations, operational information, and supporting documentation. Any identified issue must be evaluated by the responsible department before corrective action is closed.

Operational continuity remains a priority. Departments are required to coordinate planned maintenance activities with station operations and ensure that safety requirements are satisfied before work begins.

Where equipment defects or infrastructure concerns are identified, the responsible technical team shall record the issue, assess the severity, assign responsibility, and complete corrective action within the specified timeframe.

Supervisors shall verify completed work and maintain appropriate supporting records. Completion evidence should include inspection results, photographs where applicable, maintenance records, and approval from the designated authority.

Key Findings

Finding	Status	Responsible Department
Routine inspection completed	Completed	Engineering
Preventive maintenance requirement	Open	Maintenance
Safety verification	Pending	Safety Department
Documentation update	Open	Operations

Required Action Items

1. Maintenance team shall inspect the equipment identified in Section 63 and complete the required corrective work by 2026-09-04.

2. The responsible department must submit the inspection and completion report to the Operations Control Centre by 2026-09-24.

3. Safety personnel shall review the identified risks and provide mitigation recommendations before 2026-09-04.

Deadline Information

The primary completion deadline for this section is 2026-09-04. All responsible personnel shall ensure that the required action is completed and documented before the stated deadline.

Management Note

Outstanding actions shall remain under departmental monitoring until satisfactory completion evidence has been submitted. Any delay affecting safety, operations, passenger service, or asset availability must be escalated to the appropriate management authority.
